AmbulanceMed

ELECTRIC INSTALLATION

The entire electrical system used in the design and equipping of the ambulance, including medical devices and connection mounting elements, is manufactured to meet the EN 1789+A2 standard.

IVECO DAILY AMBULANCE INSTALLATION MATERIALS

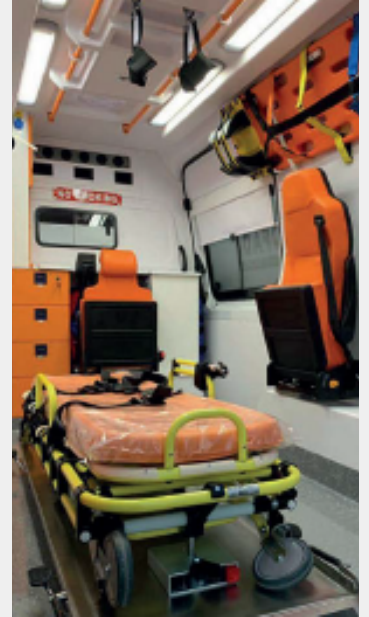

The installation materials used in the ambulance comply with ISO 1435, ISO 6722-1, and other equivalent international standards. The ABS covering material used in the ambulance is fireproof, ensuring safety and durability.

The Daily ambulance features a specialized electric installation for its electric equipment, transformers, and accessory electric chukkers. These components are distinguished by a different color from the chukkers in the ambulance's electric system. They are insulated with thermoplastic covering, ensuring high durability and heat resistance.

Electric cable connectors and sockets, the external 220V electric system, as well as the inverter and rectifier devices in the ambulance, are manufactured to comply with EN ISO 8092-1, EN ISO 8092-3, and EN ISO 8092-4 standards. The installation is specifically designed for use in Daily ambulances.

The ambulance is equipped with a 15 Ah rectifier and a 220V input socket, located on the left side of the vehicle. This socket is protected from water and dust and provides the necessary battery charge to the Daily ambulance during periods of inactivity or while the vehicle is at rest.

There is a rectifier, which has 15 Ah capacity, and 220V input socket which is sheltered from water and powder in the left part in vehicle general which give to Daily ambulance vehicle to required battery charge while it doesn't work or it is in the resting times.

Daily AMBULANCE INTERIOR

At **AmbulanceMed**, we take pride in outfitting the ambulance interior with the latest technological advancements, ensuring it meets the demands of modern emergency medical services. Our commitment to excellence is reflected in every aspect of the ambulance's design.

The interior is thoughtfully equipped with state-of-the-art, customized medical equipment, ensuring readiness for any situation. From advanced medical devices to intuitive, user-friendly layouts, every detail is tailored to meet the needs of both emergency responders and patients. With **AmbulanceMed**, you can trust that our technologically advanced ambulances are designed to deliver the highest standard of care when it matters most.

TECHNICAL AND MEDICAL EQUIPMENT IN Daily AMBULANCE

The ambulance is equipped with LED headlamps on both the front and rear ceilings, ensuring visibility from the outside. These lamps can be controlled from the driver's cabin and also feature an audible warning system. Additionally, the rear projector, integrated with the headlamp, automatically illuminates the ambulance's main stretcher area whenever the back door is opened, enhancing visibility during patient loading and unloading.

The Daily Ambulance patient compartment is spacious enough to accommodate two patients simultaneously, allowing for medical intervention while one patient is lying down and the other is seated. The ambulance's external dimensions will remain consistent with the original specifications provided by the manufacturer, with no alterations made to its size after leaving the factory. Additionally, there will be no modifications to the vehicle's sides or polymer components.

Daily Ambulance Cabin Lighting

The cabin is illuminated by 4 LED lamps and 2 spotlights, all controlled from the driver's cabin. The lighting system is managed through a control panel located within the vehicle's cabinet.

Ambulance Digital Electric Panel

The entire electrical system of the ambulance is controlled by a panel situated in the patient cabin, near the sliding door. This panel can be both digital and touch-sensitive for ease of use.

Ambulance Heater

The patient cabin is equipped with a heater powered by a diesel engine or water-based system to provide warmth in cold conditions. Additionally, there is an accessible door on the right side of the Daily ambulance compartment, allowing for easy patient transfer. Grip bars are installed on the rear doors and the left side of the sliding door to assist with entering and exiting the ambulance.

TECHNICAL AND MEDICAL EQUIPMENT IN Daily AMBULANCE

The floor covering of the ambulance is designed as a single, seamless piece. It is skidproof, easy to clean, and can be washed with water. The material is antibacterial and highly resistant to combustion and structural chemicals, ensuring durability and safety.

Outdoor Lighting of the Ambulance

The ambulance features outdoor lighting that operates in sync with six blue and red headlamps, providing enhanced visibility during emergency situations.

Cupboard System of the Daily Ambulance

The Daily ambulance cabinets are constructed using PVC-coated foamboard material. The cupboard covers can be customized in orange, blue, or white, and are made with antibacterial materials. The cupboard covers are 17mm thick and have a foamboard density of 1.1kg/m³. All materials used are compliant with 95/28/EC non-flammability standards.

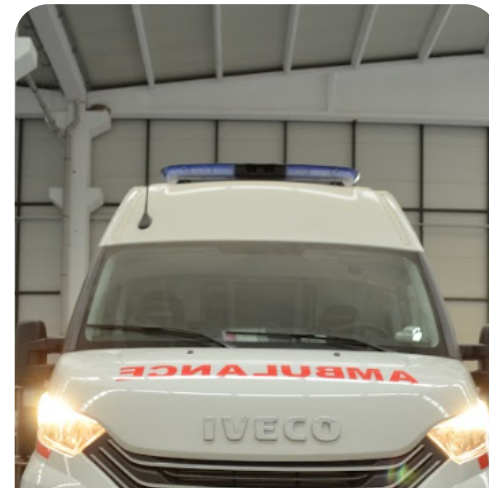

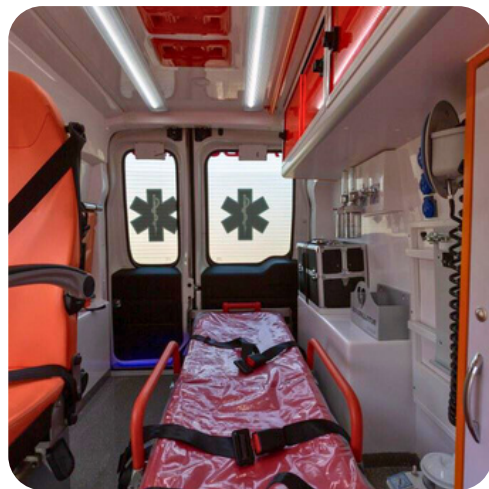

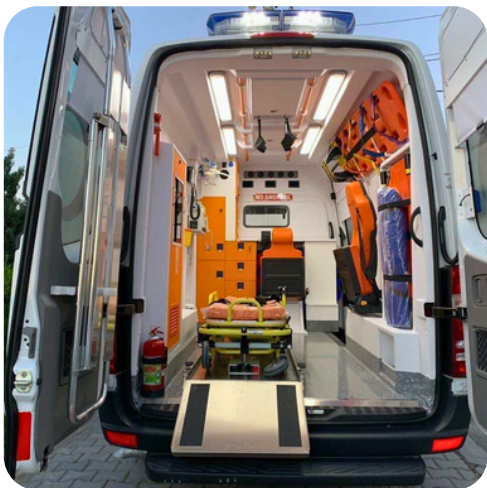

The ambulance's interior coverings are manufactured as single pieces, following ABS principles. These materials are both antibacterial and fireproof, easy to clean, and meet EN1789 standards for durability and safety.

WE ARE HONORED TO WORK WITH YOU

The Box Type Ambulance provides more space than a Van Type Ambulance thanks to its structure. With its advanced structure and medical equipment it allows the health staff to give an intensive care treatment to the injured until arriving to hospital.

Looking forward to future collaborations
